

Sub C1
B1

1. (Twice Amended) An information processing system comprising:

a first information processing device having a first wireless communicator for receiving and sending data information by wireless communication and a display for displaying the data information; and

a second information processing device having a second wireless communicator for receiving and sending data information by wireless communication from the first information processing device and a display for displaying data information corresponding to the data information displayed by the display of the first information processing device

Sub C2

2. (Twice Amended) An information processing system according to claim 1; wherein the data information displayed by the display of the second information processing device corresponds to information relating to a remaining charge of a battery of the first information processing device.

Sub C2

3. (Twice Amended) An information processing system according to claim 1; wherein the data information displayed by the display of the second information processing device corresponds to information relating to an ongoing communication state between the first information processing device and an external device.

Sub 4
B2

6. (Amended) An information processing system according to claim 1; further comprising mounting means for mounting the second information processing device on a person's arm.

Sub
C3
B3

8. (Twice Amended) An information processing method, comprising the steps of:

providing a first information processing device having a first wireless communicator for receiving and sending data information by wireless communication and a first display for displaying the data information;

providing a second information processing device having a second wireless communicator and a second display;

and

operating the second information processing device so that the second wireless communicator receives data information by wireless communication from the first information processing device and the second display displays data information corresponding to the data information displayed by the first display.

Sub
D6
B3

10. (Twice Amended) An information processing method according to claim 8; wherein the data information displayed by the first display comprises first level information; and wherein the operating step comprises displaying with the

B4
second display second level information corresponding to a sub-level of the first level information.

BS
sub
cl
15. (Amended) An information processing system comprising:

a first information processing device having a first wireless communicator for receiving and sending data information by wireless communication and a display for displaying the data information;

a second information processing device having a second wireless communicator for receiving and sending data information by wireless communication from the first information processing device and a display for displaying information; and

display control means for controlling the display of the second information processing device to display data information corresponding to the data information displayed by the display of the first information processing device.

sub
16. (Amended) An information processing system according to claim 15; wherein the data information displayed by the displays of the first and second processing devices comprises characters, symbols and images.

17. (Amended) An information processing system according to claim 15; wherein the data information displayed by the display of the second processing device corresponds to

information relating to a remaining charge of a battery of the first information processing device.

18. (Amended) An information processing system according to claim 15; wherein the data information displayed by the display of the second information processing device corresponds to information relating to an ongoing communication state between the first information processing device and an external device.

SUB
DID
19. (Amended) An information processing system according to claim 15; wherein the data information displayed by the display of the first information processing device comprises first level information; and wherein the data information displayed by the display of the second information processing device comprises second level information corresponding to a sub-level of the first level information.

Kindly add the following new claims 21-25:

BL
21. An information processing system according to claim 1; wherein the display of the second information processing device displays data information identical to the data information displayed by the display of the first information processing device.

22. An information processing system according to claim 1; wherein each of the displays of the first and second information processing devices displays a portion of the data information.

23. An information processing system according to claim 1; wherein the display of the second information processing device displays data information corresponding to a sub-level of the data information displayed by the first information processing device.

24. An information processing system according to claim 1; wherein at least one of the first and second information processing devices has a band for mounting the information processing device on a person's arm.

25. An information processing system according to claim 1; wherein the second information processing device has a switch; and wherein data information displayed by the display of the second information processing device is transmitted to the first information processing device by operating the switch of the second information processing device.
